

Clinisept+ Skin

The UK's leading skin prep now available to the beauty sector.

Enhancing results from procedures such as chemical peels, dermaplaning, laser treatments, microneedling and more...

Provide your clients with the best skin protection and hygiene on the market. Clinisept+ Skin should be used pre, during and post-treatments for best results.

How to use 490ml

Clinisept+ Skin should be applied by wiping it onto the skin using a sterile gauze or cleansing pad. Ensure the skin is soaked through.

Skin Prep

Before any cosmetic or aesthetic treatment, apply Clinisept+ onto clean skin to deliver optimal pre-procedure hygiene and antimicrobial protection against complications. Apply using a circular motion to this skin and leave for 15 seconds. Soak up any excess with a cotton pad.

During Treatment

Unlike traditional antimicrobials, Clinisept+ Skin may also be used during a cosmetic or aesthetic treatment to maintain optimum hygiene. It cools and calms the skin, minimises the appearance of redness, soothes irritation and promotes rapid recovery.

Ingredients

Hypochlorous Acid, Aqua, Phosphoric Acid. Clinisept+ Skin is a high purity hypochlorous solution manufactured to GMP ISO 22716.

Meets BS EN1040, BS EN1276, BS EN13727, BS EN1650, BS EN13624, BS EN14476, BS EN13704.

Clinisept+ Skin

- + **Powerful antimicrobial cleansing removes 99.99% of germs**
- + **Free from alcohol, chlorhexidine and harsh chemicals**
- + **No stinging or irritation and cools and calms the skin**

Clinisept+ is used and trusted by the world's leading cosmetic professionals.

“Clinisept has been a great substitute for chlorhexidine for me in both my injectable and laser based procedures. I have noticed reduced skin irritation and erythema with its use versus chlorhexidine both during and after treatments.”

Dr Benji Dhillon
Aesthetic Surgeon, Define Clinic.

Clinisept+ Skin

The UK's leading skin aftercare now available to the beauty sector.

Reducing downtime and enhancing results following procedures such as chemical peels, dermaplaning, laser treatments, microneedling and more...

Equip your clients with clinic standard aftercare to use at home following treatments.

How to use 100 ml

Spray Clinisept+ Skin 100ml directly onto the skin, or spray onto a cotton pad and gently wipe over the area using a circular motion.

To keep recovering skin clean and calm, apply 2-3 times a day as required or as instructed by your practitioner.

For maximum care of recovering or irritated skin, saturate a gauze or pad with Clinisept+ and leave it to soak on the affected area for five to ten minutes.

For best results, leave skin to dry naturally.

Irritated skin after laser treatment.

15 minutes later, after the application of Clinisept+.

Ingredients

Hypochlorous Acid, Aqua, Phosphoric Acid. Clinisept+ Skin is a high purity hypochlorous solution manufactured to GMP ISO 22716.

Meets BS EN1040, BS EN1276, BS EN13727, BS EN1650, BS EN13624, BS EN14476, BS EN13704.

Clinisept+ Skin has a loyal fan base.

"I was first introduced to Clinisept+ by my beauty therapist and have been using it ever since. Clinisept quickly cools and calms my skin following laser treatments and seems to really help with redness and irritation."

Julie Pattern
